WoWe- AED Workplace Wellbeing and Needs Assessment Survey

Objectives:

- Baseline measures of Workplace Wellbeing (WoWe) and burnout
- Generate potential ideas for improving WoWe at AED

What?

Determinants of clinician/workplace wellbeing can be seen as comprising 3 parts. These include a *Culture of Wellness*.

Efficiency of Practice and

Personal Resilience.

Why?

We believe staff wellbeing is vital to the optimal functioning of our department. Wellbeing can suffer in our stressful work environment.

Staff burnout, high staff turnover, increased errors, low morale, increased complaints, increased monetary costs, suboptimal patient care and patient outcomes: these are some of the potential downsides of poor staff wellbeing.

We believe that we, the staff, are the experts in the needs of our department. We believe our views are important to ensure we work in an excellent workplace.

How?

This survey is to gather some baseline information to asses our WoWe and burnout. It can be compared to future surveys. The ideas generated may lead to useful interventions to improve/maintain our wellbeing.

This survey has institutional and departmental research approval. It has not needed Ethics Committee approval as it is an audit. This has the approval of AED management, but is independent of management. All information is confidential. It cannot be linked to individuals.

Please ask members of the <u>AED Healthy Workplace Group</u> (details on the AED intranet site) for further information, to discuss ideas, or for assistance. Other sources of assistance if you are particularly interested or concerned include your GP, EAP, or a trusted colleague.

Thank you,

The AED Healthy Workplace Group
* 1. Are you willing to take the survey?
Yes
○ No

This survey applies to those working in the Adult Emergency Department
* 2. Do you work at AED?
Yes
○ No
3. Is AED your main place of work outside the home?
Yes
○ No
No/Other (please specify)

Needs assessment
Staff wellbeing can be thought of in 3 broad areas: • Personal resilience • Workplace culture • Workplace efficiency
<u>Workplace efficiency</u> refers to things such as having enough staff to do a decent job, having good processes, good IT, clear guidelines, enough space, etc, etc. That is, having a place that <i>works</i>
(There is no point in being resilient, with a great culture, if you can't do simple things for your patient)
3 factors of staff wellbeing.
21. What can be done to improve the CULTURE of our department? Culture refers to how we behave towards one another, the general atmosphere.
22. What can be done to improve the EFFICIENCY of our department Efficiency refers to how things run, the processes, the hardware.
23. What can be done to improve our personal RESILIENCE? Resilience refers to being able to survive and thrive in a challenging environment.

Mentoring

Mentoring can be useful to help many with work. Many believe that mentoring can be a useful way to enable people to get the most out of their work, and fulfill their potential. For the past 2 years there has been a mentoring program in AED that involves many doctors. (Most mentees are registrars, most mentors are consultants).

Mentoring is confidential. It is NOT the same as clinical coaching, or supervision. There is no reporting. It is voluntary for both the mentee and mentor.

31.

Mentoring:

"The process whereby an experienced, highly regarded, empathic person (the mentor), guides another individual (the mentee) in the development and re-examination of their own ideas, learning, and personal and professional development."

Given this statement, would you be interested in a nurse mento	oring programme in the AED?
]
32. Given the above definition, are you in a mentoring partnership?	
Yes	
○ No	
Perhaps (please explain)

Mindfulness/meditation

- Training in mindfulness has been used in various workplaces and has shown to be beneficial for some participants.
- It has been recommended for those who work in stressful environments.
- It is NOT based on any religion.

e.g. 1 hour per week, for 4 weeks?
